—SEE OFFICE ACTION ON THE FOLLOWING PAGES—

This Office Action is in response to the papers filed August 11, 1998.

Claims 11 and 14 are rejected under 35 U.S.C. §102(b) as anticipated by Selvakumar et al. (United States Patent 5,426,069). See Selvakumar et al's Figs. 1-7 embodiment in particular.

Claims 12-13 are rejected under 35 U.S.C. §103 as being unpatentable over Selvakumar et al. (United States Patent 5,426,069) together with Crabbe' et al. (United States Patent 5,821,577).

With respect to dependent claim 12, the difference between its transistor and Selvakumar et al's transistor is that they are p-type and n-type, respectively. Crabbe' et al. illustrates a p-type SiGe channel transistor. It would have been obvious to one skilled in this art to extend Selvakumar et al's disclosure to a p-type transistor as suggested by Crabbe' et al.. Claim 12 is thus rejected under 35 U.S.C. §103 as being unpatentable over Selvakumar et al. together with Crabbe' et al..

With respect to dependent claim 13, the difference between its transistor and Selvakumar et al's transistor is that the latter's SiGe channel thickness is unknown while the former's SiGe channel thickness is "approximately 100 to 1,000 angstroms thick." Crabbe' et al. illustrates a 150 angstrom thick SiGe channel (see Figure 1(a)). It would have been obvious to one skilled in this art to make Selvakumar et al's SiGe channel 150 angstroms thick as suggested by Crabbe' et al.. Claim 13 is thus rejected under 35 U.S.C. §103 as being unpatentable over Selvakumar et al. together with Crabbe' et al..
